Summary

Computer Science undergraduate focused on backend engineering, AI/ML systems, and open-source software, with contributions merged into projects including TensorFlow, bpftrace, and CyberChef. Experienced in building production-oriented APIs, retrieval systems, data pipelines, and full-stack applications.

Education

KIET Group of Institutions, Ghaziabad 2024–2028
B.Tech in Computer Science and Engineering (Artificial Intelligence) **CGPA: 7.96/10**

Oxford Public School, Gorakhpur 2022–2024
Class XII (CBSE) **87.8%**

Technical Skills

- **Languages:** Python, Java, JavaScript, C++, SQL
- **Frontend:** React.js, Vite, React Router, Tailwind CSS
- **Backend:** FastAPI, Node.js, Express.js, REST APIs, JWT, RBAC
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis
- **AI/ML:** TensorFlow, Keras, Scikit-learn, NLP, Embeddings, Hybrid Retrieval, Reranking
- **Cloud & DevOps:** AWS, Docker, Git, GitHub Actions, Vercel
- **Tools:** Linux, GitHub, MLflow, Pytest, Swagger/OpenAPI

Open Source Contributions

- **TensorFlow:** Merged a pull request with reviewer approval and passing TAP tests.
- **bpftrace:** Fixed incorrect `func` builtin resolution for probe return/exit branches.
- **CyberChef:** Landed 4 merged PRs: error handling, duplicate-operation removal, API docs, and HTML rendering fixes.
- **OpenSeadragon:** Resolved an **Object URL leak** in the ImageBitmap worker path; shipped in **v6.1.1**.
- **CatBoost:** Fixed a JNI local reference leak in exception handling (`RethrowExceptionFromJavaToCpp`).
- **refined-github:** Fixed a `pr-from-branch` selector bug that broke on forks with a "Sync fork" button.
- **NewPipe:** Fixed an intermittent `IllegalStateException` crash during ViewPager state restoration; accepted as the fix for issue #13740.

Projects

Otoichi – Full-Stack Vinyl Marketplace Live
React.js · FastAPI · MongoDB · Redis · Stripe

- Engineered a full-stack marketplace (catalog, auth, cart, coupons, orders, payments, admin) with React and async FastAPI.
- Implemented server-authoritative checkout (Stripe PaymentIntents, HMAC webhooks) with atomic MongoDB ops for concurrency-safe inventory.
- Built Redis cache-aside infra, JWT/RBAC auth, metadata ingestion, and a **50-test** Pytest/HTTPX suite.

CRT – AI Internet Archaeologist
Python · FastAPI · PostgreSQL/pgvector · NLP · Hybrid Retrieval

- Built an AI platform reconstructing historical timelines and claim provenance from web sources via iterative retrieval and synthesis.
- Implemented hybrid retrieval (BM25 + dense vectors, RRF, cross-encoder reranking) with entity resolution and multi-source claim verification.
- Designed an iterative research loop that detects evidence gaps, runs follow-up searches, and generates grounded, knowledge-graph-backed reports.

Nocturne.ai – Quantitative Research Platform
React.js · Node.js · Express.js · MongoDB · Gemini · Amazon Nova

- Built a quant research platform combining market analytics, social sentiment, and AI insights, powered by a Reddit ingestion pipeline.
- Engineered authenticated REST APIs (JWT/Bcrypt) with MongoDB/Mongoose models and modular services for market signals.
- Integrated Gemini and Amazon Nova for ticker-level summaries; built React dashboards for sentiment and engagement metrics.

Achievements & Certifications

- Solved **200+** DSA problems on LeetCode/GeeksforGeeks; earned **Best Delegate** awards at multiple MUN conferences.
- AWS Certified Cloud Practitioner – Amazon Web Services | Machine Learning – Infosys Springboard
